Andreas A. Ioannides

Laboratory for Human Brain Dynamics

**Basic and applied research on normal and pathological brain
activity using EEG & MEG**

Cyprus Neurofeedback Center (CNFC)

**Services for brain training for optimal performance and
self-maintenance of good health and well-being**

**We have collaborations with top scientists, institutions and companies
globally in these two areas.**

AAISCS pitch at Horizon Europe national info day 18.1.2023

NEA2RS completed and DARTS just started:

Development of a test procedure for continuous tracking of performance linked to individual's sleep (DARTS)

Primary Objective: Study how neuronal activity relates to decision making, handling of errors and environmental monitoring.

Eventual goal is to relate the results with what we learnt in our previous ESA contract, studying similar mechanisms in sleep, allowing us to deliver personalized health, monitoring of behaviour and peak performance.

Other ongoing projects and areas of interest include:

- 1) Neurodiversity**
- 2) Preventative electrophysiological monitoring of environmental effects on human health**
